

Distribution Build Kit

for Desktops, Servers, NAS, Firewalls and other embedded tasks

T² is a sophisticated Distribution Build Kit that allows the automated creation of custom distributions accross operating systems like GNU/Linux, OpenDarwin and more. T² supports a variety of different architectures, including x86-64, PowerPC, UltraSPARC, ARM and many more.

T² enables you to optimize your system exactly for your target architecture, thus accelerating your product over its current limits.

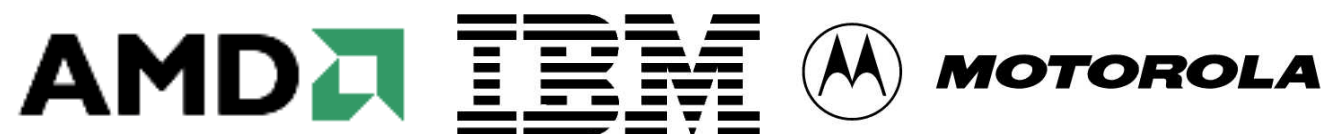

T² is released under the GPL and maintained by a worldwide community.
